NOVI Energy Biomass Handling System

Company:

NOVI Energy

Location:

South Boston, Virginia

Date of Completion:

April 2013

Description:

BRUKS Rockwood supplied the Complete Biomass Woodyard handling system for the South Boston mill site in South Boston, Virginia. The system has been designed to receive, process, and deliver fuel to the boiler for the production of 50MW gross electric output. The yard consists of 2 truck dump platform stations capable of receiving 5-6 truckloads of biomass per hour, 2 stoker reclaimers with control modifications that process 75 TPH, a screen and hog tower, and the associated conveyor equipment to process and transport biomass fuel to the powerhouse. Headquarter in Granite Falls, Minnesota, Fagen, Inc. is overseeing the construction of the complete system, with design by Bibb Engineers located in Kansas City, Missouri.
